Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a method of identifying and synthesizing a set of oligonucleotides for physical recombination comprising providing two or more parental character strings, aligning the sequences to identify pairwise homologies, manipulating the sequences by applying a genetic operator such as crossover operator to generate derivative character strings, selecting a set of character substrings from the derivative strings, and synthesizing the set of oligonucleotides to be used for in vitro physical recombination. The closest prior art is Stemmer, W.P.C. (IDS document: Proc. Natl. Acad. Sci. USA, Vol. 91, pages 10747-10751, 1994) who discloses a method of in vitro recombination by DNA shuffling. Stemmer provides in Fig. 5 two parental character strings, aligns the strings and indicates the areas of homology and heterology between the strings, and indicates the positions of crossover between the two strings. However, the crossover points between the character strings were provided only after the the crossover (recombination) events occurred and recombinants were sequenced, whereas the instant claims apply the genetic operators first to the two or more parental character strings first to generates crossover oligonucleotides and synthesize the oligonucleotides for further in vitro physical recombination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
